

Triple your profit with

NEW

CONVERTA³

The original Converta still available.

The new triple Converta is a simple replacement for a standard flush mount twin socket. The double pole

polycarbonate unit conforms to BS 1363 part 2, has high integrity earthing with two

earth terminals and an integral fuse discreetly positioned on the side of the facia. Installation is fast and simple as there is no requirement

for chasing or making good and the electrical connection is made in the same way as a twin socket. Material and labour costs are reduced which dramatically increases the profit on any given job.

The new triple Converta and the original single - to - double socket

Converta are popular for both domestic re-wiring and commercial

re-furbishment. Both Converta's are available now from your local electrical distributor.
