

# LexCom Home<sup>®</sup>

## Entertainment networking system

LexCom Home is a flexible and future-proof network providing common connections for telecoms, data, television and audio throughout the home via a central distribution hub. Changing the function of an outlet, say from TV to telephone is simply achieved by swapping a connection in the distribution hub.

Your developer has already prepared your new home, or is able to do so during the build phase allowing you to decide which of the LexCom Home benefits you choose to have as standard in your new home.

# Your home is ready

**LexCom** Home entertainment networking system

LexCom Home centralises all of the incoming services to the building, such as TV, broadband and telephone, then distributes them around the home. This allows you great flexibility in how and where these services can be used, enabling smart living to become a reality.

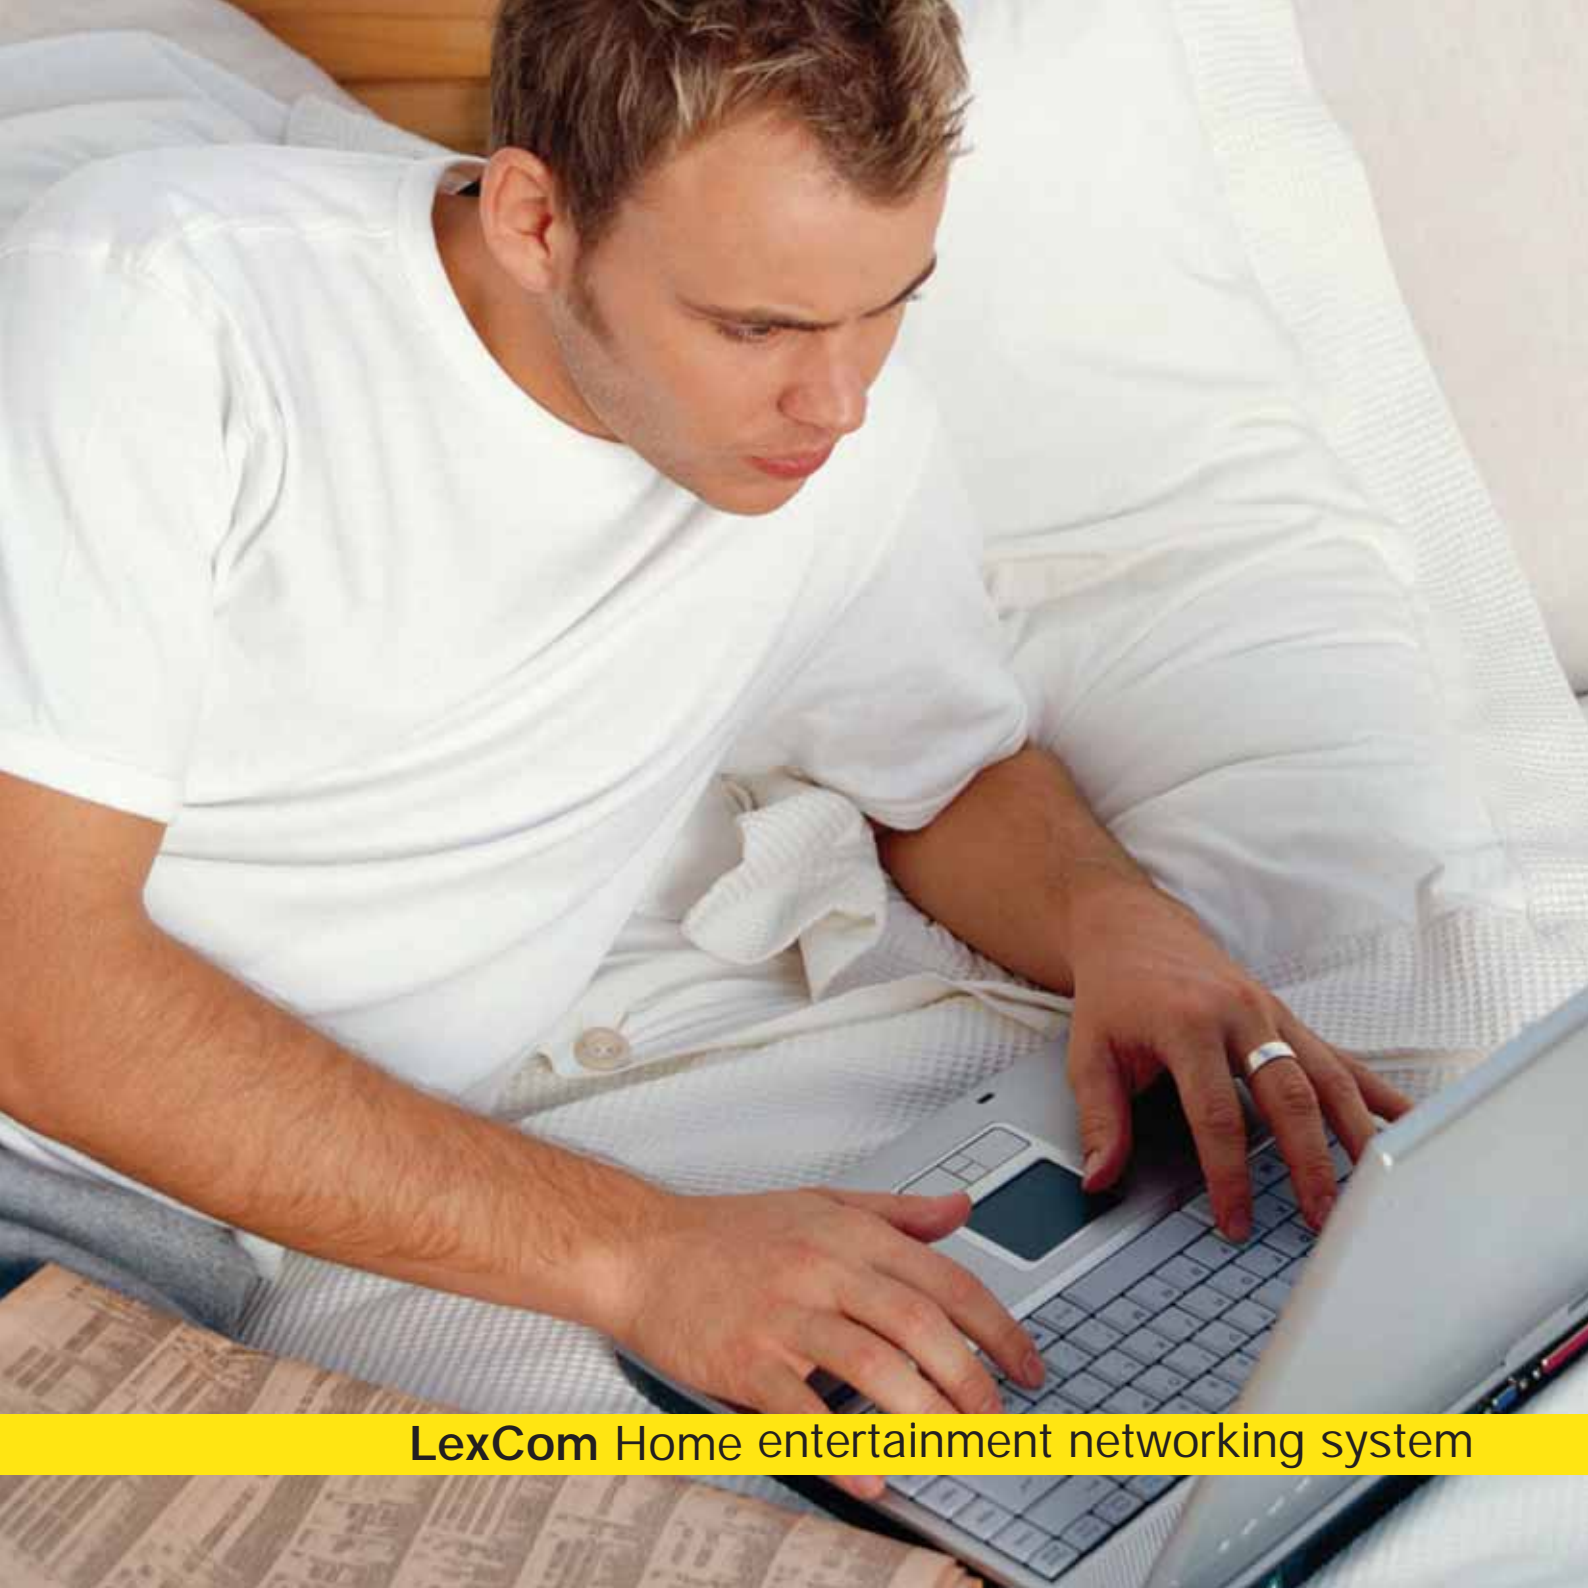

Typical benefits can include:-

- View satellite, cable or terrestrial TV in any room with full remote control\*
- View/control central services like DVD, VCR or games consoles from any room\*
- Have broadband access enabled from anywhere in the home\*

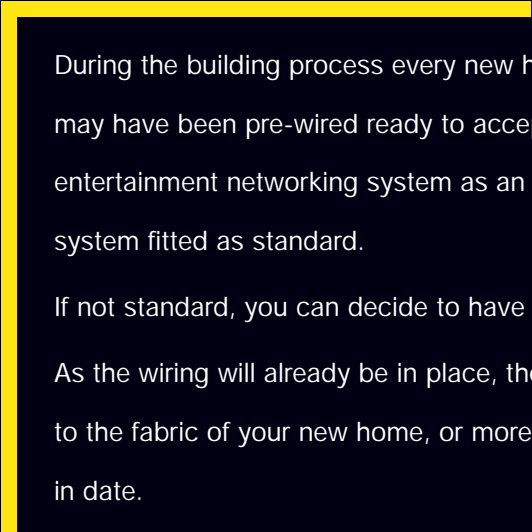

Ask your developer for a system demonstration or a copy of the Enhanced Living CD to see further benefits.

\* Dependant on system configuration specified

# Be flexible

**LexCom** Home entertainment networking system

During the building process every new home on the development may have been pre-wired ready to accept the LexCom Home entertainment networking system as an option, or has the basic system fitted as standard.

If not standard, you can decide to have LexCom Home installed\*.

As the wiring will already be in place, there will be no disruption to the fabric of your new home, or more importantly your moving in date.

Once you have moved in, you can decide how to organise each room, should you have phones in every room?, Do all the bedrooms need TV?, Or which rooms would you like to surf the web from?

Why not discuss the various upgrade options with your developer.

The system will benefit you for many years to come, however if you do move on, selling a networked home is sure to both add value, and make your home more sought after as prospective purchasers demand more from their properties.

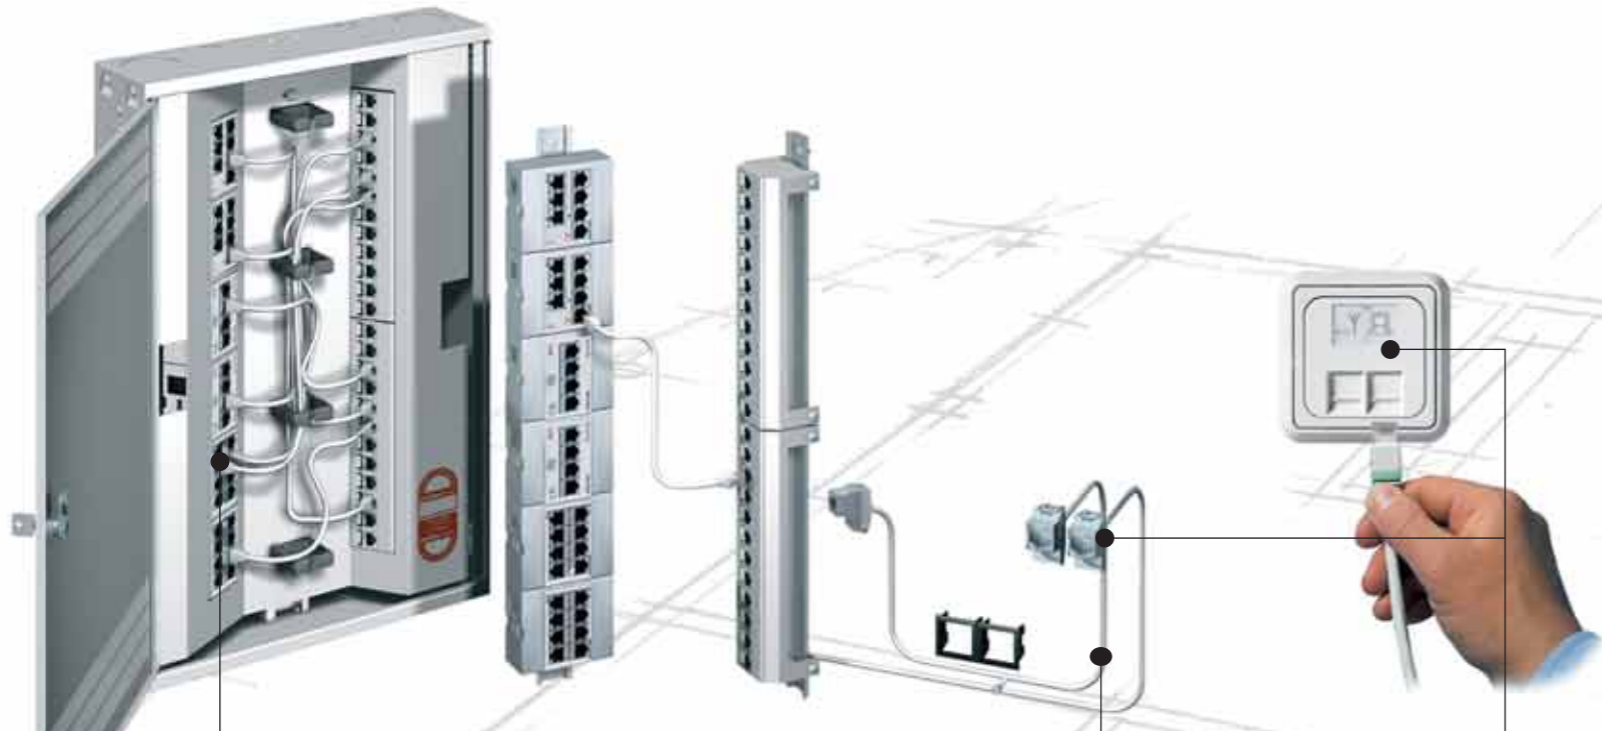

\* Dependent on build stage of the property.

# Get connected

**LexCom** Home entertainment networking system

### Changing functions is easy

Behind the panel, the distribution centre looks a bit like an early telephone switchboard. For every outlet in the room there is a corresponding outlet at the distribution centre. A linking cable is used to feed the service required (e.g. telephone, data, TV) through to the appropriate room outlet.

For example to change a TV outlet in a room into a broadband computer outlet, simply unplug the linking (patch) cable from the TV module at the distribution centre and plug it into a spare socket on the data module. In the room a computer can now be connected to what was a moment ago a television outlet.

### No extra wiring is needed

To ensure there is no delay in the purchase of your new home, all of the cabling is pre-wired ready to accept a LexCom Home system. All that is required is to have the distribution centre and universal socket outlets fitted.

### Flexible wall sockets

Wall mounted sockets situated throughout the home can be connected to a range of devices using an adapted connector. The outlet is simply redefined by swapping a patch cable in the distribution hub.

### What do I do now?

- Request a system demonstration from your developer. They will show you the benefits of the LexCom Home entertainment network and answer any questions you may have
- Ask for a free CD which explains the benefits in detail
- Should you wish to upgrade the system your developer will explain what options are available. A range of upgrades are available to suit your lifestyle
- When you have decided to have a LexCom Home system installed your developer will take your order and arrange the installation
- All LexCom Home installations are carried out by fully trained and authorised professionals who will fit and test the packages or upgrades you choose, leaving you free to move in and enjoy the benefits of a smarter home for years to come
