The LIM® 3/110 3-Channel-Controller makes setting and calling up of colour of light or light level possible on keystrokes.

3 groups of lights with digital operating devices for a control voltage of 1-10 V (ex. Fluorescent bulbs, low-voltage halogen or high volt halogen bulbs) can be controlled, 4 light sequences pre-programmed can also be called up by keystrokes.

Also a dynamic operational sequence of the setup light scenes is possible owing to selectable standing and blend over times. 4 different sequencing programs with 8 light scenes each are already programmed in the system.

Further features are panic configuration, external switching entrance, variable time intervals, A comfortable system, whereby no prior knowledge is needed to operate it.
